## Instructions

### Water Melon and Pumpkin Tap Kit

1) Cut out a small section from top of the melon or pumpkin.

2) Scoop out the contents from inside to hollow it out.

3) Create a small hole close to the bottom of the melon (about 2-3 inches from the bottom). You can use a drill or paring knife to make the hole. Start with a hole smaller than the diameter of the shank.

3) Attach the faucet to the front of the shank and then insert the shank gently into the hole.

4) Tighten the provided nut to the back of the shank from inside the melon.

5) Place the melon so that it sits straight and secure. To place it on a flat surface you might have to cut out a small section from the bottom.

6) Fill up the melon with a drink of your choice. Avoid thick and chunky drinks which may clog the tap.

7) Enjoy!. Pull the handle forward to pour. Let it go to shutoff.
